- **Q&A and Closing**

NETWORKING APERITIF

THE PROJECT

Comprising 95% SMEs and micro-enterprises, the construction sector often resists adopting innovative technologies such as BIM, IoT, Augmented Reality, and Digital Twin. These technologies are essential for addressing challenges related to competitiveness, innovation, and sustainability.

ET4Digital has addressed these gaps by training trainers to become change agents capable of guiding SMEs toward digital transformation. The project emphasized innovative tools and new teaching methodologies to develop advanced digital skills, created technology demonstrators, and designed capacity-building programs to foster innovation and make the sector more attractive to young people and professionals
